The screenshot shows the WHM MultiPHP Manager interface. The top navigation bar includes links for Dashboard, hr.jportales.com - Editar image, VPS - Hosting, cPanel - Tools, and WHM [julito] MultiPHP Manager. The main content area is titled "PHP-FPM SETTINGS FOR: HR.JPORTALES.COM". It displays the following settings:

- PHP-FPM Pool options**
 - Max Requests** (20): cPanel Default: 20
 - Max Children** (5): cPanel Default: 5
 - Process Idle Timeout** (10): cPanel Default: 10
- PHP-FPM INI Settings**
 - ☒ **Treat URLs as files (allow_url_fopen)** (Block domain from changing the setting)
 - ☒ **Log errors (log_errors)** (Block domain from changing the setting)
 - ☒ **Recognize code between tags as PHP source (short_open_tag)** (Block domain from changing the setting)

On the right side, there is a "NEED HELP?" section with links to "Official PHP-FPM Configuration Documentation", "Bottleneck with Child Processes", and "More documentation on error reporting".
